Total:	13	

#### Instructions

- 1. This is a closed-book exam: written aids are not permitted.
- 2. Calculators, phones and all other electronic aids are forbidden.

# In which questions varied and sundry are asked

. Explain the differences between:	
(a) Pointers vs references	
<b>Solution:</b> A pointer is a number, a location in memory, so it must be <i>dereferent</i> . A reference can be treated just like the thing it references.	nced to access a value.
(b) static_cast vs dynamic_cast	
<b>Solution:</b> The compiler has all information required to do a <b>static_cast</b> at co a <b>dynamic_cast</b> requires run-time information.	ompiler time, whereas
Define the following terms.	
(a) Expression	
Solution: Something that can be evaluated	
(b) Abstract class	
Solution: A class with at least one unimplemented method	
. What is the correct C++ syntax for:	
. What is the correct C++ syntax for:  (a) Declaring a move assignment operator within class Foo?	
(a) Declaring a move assignment operator within class Foo?  Operator = (Foo&);	
<ul><li>(a) Declaring a move assignment operator within class Foo?</li><li>operator = (Foo&amp;);</li><li>operator = (const Foo&amp;);</li></ul>	
<ul> <li>(a) Declaring a move assignment operator within class Foo?</li> <li>○ operator = (Foo&amp;);</li> <li>○ operator = (const Foo&amp;);</li> <li>√ operator = (Foo&amp;&amp;);</li> </ul>	
<pre>(a) Declaring a move assignment operator within class Foo?</pre>	
<ul> <li>(a) Declaring a move assignment operator within class Foo?         <ul> <li>○ operator = (Foo&amp;);</li> <li>○ operator = (const Foo&amp;);</li> <li>○ operator = (Foo&amp;&amp;);</li> <li>○ operator = (const Foo&amp;&amp;);</li> </ul> </li> <li>(b) Creating a subclass of class Parent?</li> </ul>	
<ul> <li>(a) Declaring a move assignment operator within class Foo?</li> <li>○ operator = (Foo&amp;);</li> <li>○ operator = (const Foo&amp;);</li> <li>○ operator = (Foo&amp;&amp;);</li> <li>○ operator = (const Foo&amp;&amp;);</li> <li>(b) Creating a subclass of class Parent?</li> <li>✓ class Child : public Parent {};</li> </ul>	
<ul> <li>(a) Declaring a move assignment operator within class Foo?</li> <li>○ operator = (Foo&amp;);</li> <li>○ operator = (Const Foo&amp;);</li> <li>○ operator = (Foo&amp;&amp;);</li> <li>○ operator = (const Foo&amp;&amp;);</li> <li>(b) Creating a subclass of class Parent?</li> <li>○ class Child : public Parent {};</li> <li>○ class Child : override Parent {};</li> </ul>	
<ul> <li>(a) Declaring a move assignment operator within class Foo?</li> <li>○ operator = (Foo&amp;);</li> <li>○ operator = (const Foo&amp;);</li> <li>○ operator = (Foo&amp;&amp;);</li> <li>○ operator = (const Foo&amp;&amp;);</li> <li>(b) Creating a subclass of class Parent?</li> <li>○ class Child : public Parent {};</li> <li>○ class Child : override Parent {};</li> <li>○ class Child : subclass Parent {};</li> </ul>	
(a) Declaring a move assignment operator within class Foo?	
<ul> <li>(a) Declaring a move assignment operator within class Foo?</li> <li>○ operator = (Foo&amp;);</li> <li>○ operator = (Const Foo&amp;);</li> <li>○ operator = (Const Foo&amp;);</li> <li>○ operator = (Const Foo&amp;);</li> <li>(b) Creating a subclass of class Parent?</li> <li>○ class Child : public Parent {};</li> <li>○ class Child : override Parent {};</li> <li>○ class Child : subclass Parent {};</li> <li>○ class Child : virtual Parent {};</li> <li>(c) Defining a lambda function that increments an integer parameter?</li> </ul>	
(a) Declaring a move assignment operator within class Foo?	
<pre>(a) Declaring a move assignment operator within class Foo?</pre>	
<ul> <li>(a) Declaring a move assignment operator within class Foo?</li> <li>○ operator = (Foo&amp;);</li> <li>○ operator = (const Foo&amp;);</li> <li>○ operator = (const Foo&amp;&amp;);</li> <li>(b) Creating a subclass of class Parent?</li> <li>○ class Child : public Parent {};</li> <li>○ class Child : override Parent {};</li> <li>○ class Child : subclass Parent {};</li> <li>○ class Child : virtual Parent {};</li> <li>(c) Defining a lambda function that increments an integer parameter?</li> <li>○ []() { return x + 1; }</li> </ul>	
(a) Declaring a move assignment operator within class Foo?	
<pre>(a) Declaring a move assignment operator within class Foo?</pre>	
<ul> <li>(a) Declaring a move assignment operator within class Foo?</li> <li>○ operator = (Foo&amp;);</li> <li>○ operator = (Foo&amp;&amp;);</li> <li>○ operator = (Foo&amp;&amp;);</li> <li>○ operator = (const Foo&amp;&amp;);</li> <li>(b) Creating a subclass of class Parent?</li> <li>○ class Child : public Parent {};</li> <li>○ class Child : override Parent {};</li> <li>○ class Child : subclass Parent {};</li> <li>○ class Child : virtual Parent {};</li> <li>(c) Defining a lambda function that increments an integer parameter?</li> <li>○ []() { return x + 1; }</li> <li>○ [x](int x) { return x + 1; }</li> </ul>	

 $\textbf{Solution:} \ \ \textbf{The Car might not be a Subaru. Use } \ \textbf{dynamic\_cast} \ \ \textbf{to check.}$ 

## Bonus questions

5. (a) What is the simplest possible lambda function?

[1 (bonus)]

Solution:  $[](){}$
